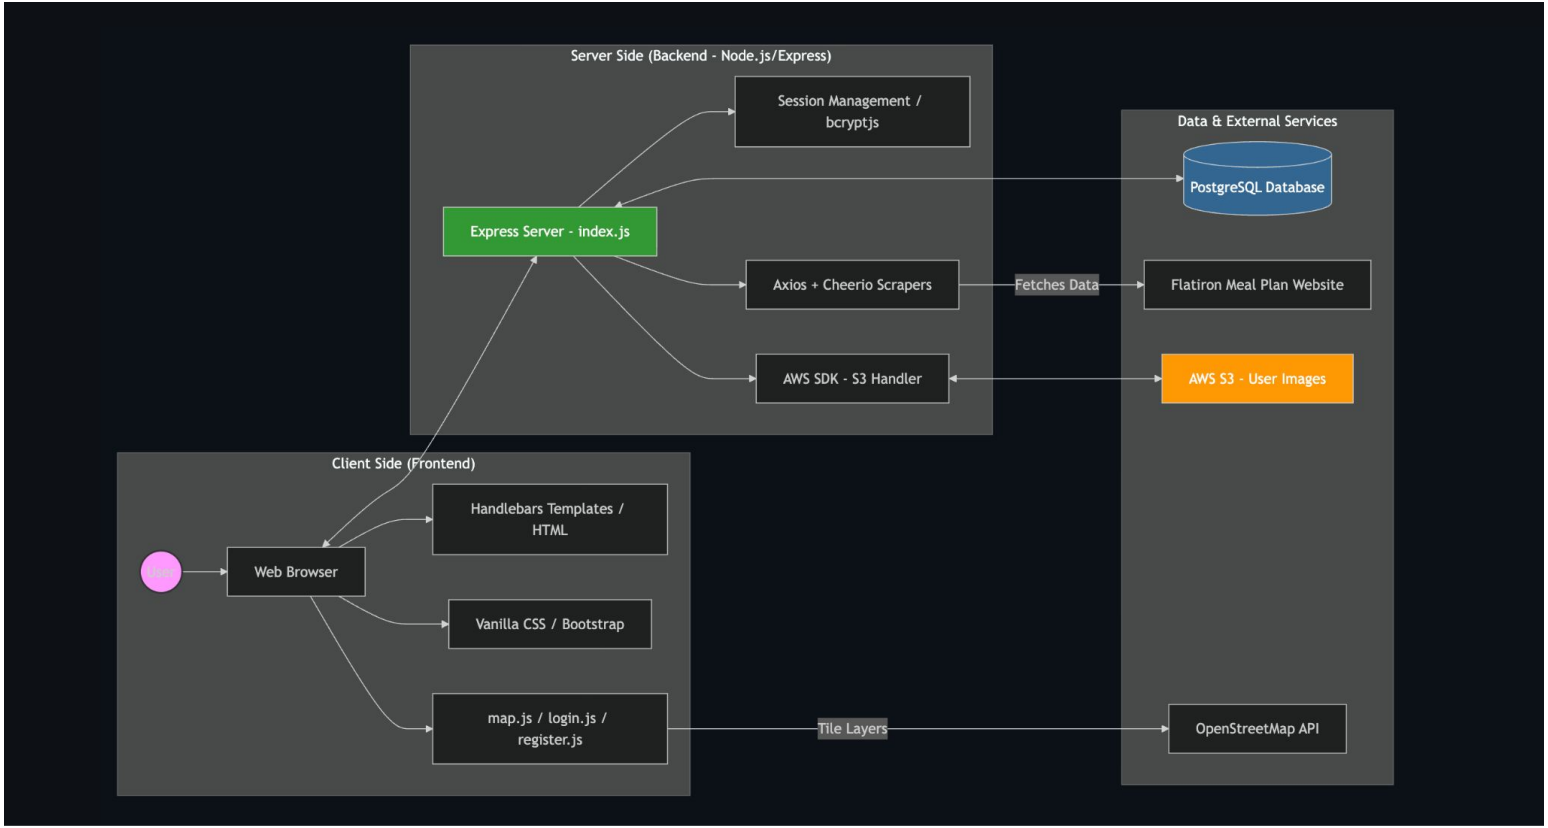
Flatiron Meal Plan Map

By the Meal Mappers: Pranav Konijeti, Marie Viita, Garrett Smith, Hayden Sandau, Ryan Falender

About Our Project

- Centralized Interactive Map: A visual interface for CU Boulder students featuring live pins for every local restaurant that accepts the Flatiron Meal Plan.
- Personalized User Hub: Includes secure login, custom dashboards, and the ability to favorite restaurants for quick access.
- Streamlined Discovery: Eliminates multi-tab fatigue by consolidating all dining data, hours, and deals into one easy-to-navigate view.

Architecture Diagram



Extra Tools/Methodolgies Used

- **Project Management**
  - GitHub/Github board (Version Control/Task tracking)
  - Discord (Coordination - Meetings were held here on Mondays at 8 along with TA meetings on Google Meets on Tuesdays at 4:30)
- **Development Tools**
  - Docker (Containerization)
  - Mocha & Chai (Testing)
- **Methodologies**
  - Agile/Scrum
  - Feature Branching

Challenges

- Nominatim OpenStreetMap API rate limiting geocoding
- Restructuring profile image code to use AWS so the app can work with Render
- Obtaining data for restaurants and deals

Future Scope/Enhancements

- Interacting with Flatiron meal plan website itself to connect customer information to our website
- Finding paths between location and pins
- Expanding to other meal plans/deals

Tool/Methodology Ratings

- Node.js & Express (API Server): 4
- PostgreSQL (Relational Database): 3
- GitHub (Version Control): 5
- Leaflet & OSM (Interactive Map): 3
- Docker (Containerization): 4
- Discord (Communication): 4
- Handlebars (Dynamic Templating): 4
- AWS S3 (Image Storage): 3
- Render (Cloud Deployment): 2
- Mocha & Chai (Testing Framework): 2
- Axios & Cheerio (Web Scraping) : 4
- Agile/Scrum (Project Mgmt): 3
- Feature Branching (Git Workflow): 3
